New Server
Create a new Server Adapter
Red Hat JBoss Enterprise Application Platform (EAP) 6.1+
RED HAT JBOSS MIDDLEWARE
A Server Adapter manages starting and stopping instances of your server. It manages command line arguments and keeps track of which modules have been deployed.
The server is:
Local
Remote
Controlled by:
Filesystem and shell operations
Management Operations
Server lifecycle is externally managed.
The selected profile requires a runtime.
Assign a runtime to this server
